DETAILED ACTION

Response to Arguments

1. In view of the Appeal Brief filed on 5/23/03, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 6, 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamm (U. S. Pat. No. 4,945,269) in view of Landin et al. (U. S. Pat. No. 6,191,510).

Regarding claim 1, Kamm shows in a yoke component (22, stator core also known as stator yoke) comprising a low carbon steel (32A, steel containing up to 1.7% of carbon) configured as a magnetic circuit of a voice coil motor (column 1, line 30) for a hard disk drive, wherein said yoke component has a finely machined portion comprising a ridge line.

Kamm does not show the improvement comprising the absence of any burr of 0.1 mm or greater in thickness on any ridgeline of said finely machined portion of said yoke component.

Landin et al. teach to remove any burrs of 0.1 mm or greater in thickness (0.763, 0.508, and 0.254 mm being greater than 0.1 mm) on any ridgeline of said finely machined portion of said yoke component (column 17, lines 40-47) for the purpose of avoiding damages to wires.

Since Kamm and Landin et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to remove the burrs as taught by Landin et al. for the purpose discussed above.

Regarding claims 6, 10, and 11, it is noted that Kamm and Landin et al. also show all of the limitations of the claimed invention.
